## MEMORANDUM FOR THE RECORD

**SUBJECT:** Meeting with Admiral Taylor  
31 December 1963

25X1A

1. After making it clear to Admiral Taylor that there were sufficiently serious reservations on our part about the analysis of the telemetry in question, I said that it was planned that [redacted] would proceed with an examination of all other material bearing on the question even if he maintained his position that the Navy data would not be released outside of their control. I then asked him to elaborate on how he expected APL to proceed with the review of the data and the development of their own systems analysis.

2. Admiral Taylor responded by saying that his plan provided for a thorough and detailed examination of all of the Navy material including the telemetry by qualified personnel of APL on their premises and not at NSA. He agreed that a detailed and thorough examination should be undertaken to consist of three or more full-time specialists in the field to devote six to twelve months of their time on the study. He is proceeding to obtain a detailed costing from APL and will furnish us with this information, he hopes by next week.

3. In the light of the above and subject to the data Admiral Taylor presents, it is possible that a satisfactory review may be obtained in this manner.

4. For us to go forward with the partial [redacted] review 25X1A still requires, however, the removal of a security block.
